

#### ABSTRACT OF LABORATORY AND CLINICAL STUDIES

Yin-Care is a combination of 14 highly concentrated herbs treasured for centuries in China for their antipathogenic properties. It has been used by millions of people over the last twenty years with remarkable effectiveness.

Yin-Care has been the subject of more than one hundred scientific studies carried out in China's medical universities and hospitals. The following abstracts have been selected from a collection of 37 research papers first published in 1992 under the title:  
***Yin-Care Symposium on Dermatology, Obstetrics and Gynecology.  
Chengdu. Peoples Republic of China.***

## **IN VITRO ANTIMICROBIAL ACTIONS**

This study was done at the Institute of Dermatology of the Chinese Academy of Medical Sciences in 1991.

Eight strains of bacteria and 18 strains of fungi were subjected — in vitro — to inoculation by Yin-Care in various dilutions. The control group was inoculated with plain water. These microbial cultures were observed over a 7-day period and were repeated twice.

The study aimed to determine the lowest concentration of Yin-Care to arrest the growth of each respective microbe. Nearly all of these bacterial and fungal cultures were neutralized by concentrations of Yin-Care ranging from 1.6% to 6.25%.

Staphylococcus epidermidis and Pseudomonas aeruginosa were notable exceptions, both requiring 50% concentrations of Yin-Care to fully arrest in vitro growth.
